

Technical Fact Sheet

Tyvek

Tyvek has all the printing characteristics of paper, but is made of pure polyethylene fibres randomly laid and compressed to form a remarkably tough material. It is ideal for all printing applications where durability is of prime importance.

Features

- Available in reels on application
- Available in self adhesive
- Excellent opacity
- Outstanding bulk to weight ratio
- Recyclable
- Special inks required
- Synthetic

Technical Fact Sheet

- Tear resistant
- Water resistant

Printing Tips

Tyvek is made of HDPE 2 (High Density Polyethylene) and can be mechanically recycled. Tyvek products which are printed, glued, welded or sewn can be recycled without any problem. Tyvek contains no foreign fillers or binders.

Important Note

Technical Fact Sheet

All statements, technical information and recommendation are based on tests we believe to be reliable, but the accuracy or completeness thereof is not guaranteed, and the following is made in lieu of all warranties of merchantability and fitness for the purpose: Sellers and manufacturer's only obligation shall be to replace such quantity of the product proved to be defective. Before using, user shall determine the suitability of the product for its intended use, and user assumes all risk and liability whatsoever in connection therewith.

Print Process

- Creasing
- Die Cutting
- Embossing
- Foiling
- Folding
- Glued
- Inkjet
- Laser
- Sewn
- Scoring
- Stapled

Tyvek is also printable using all traditional techniques such as offset, flexography, lithography, and screen-printing.
