

Technical Fact Sheet

Roban Mesh 270g FR Liner

Roban Mesh 270g FR Liner is a high tensile, open structure, air permeable knitted polyester yarn with a white digitally printable PVC coating with an ink catching peel off liner on the back. It is ideal for printed high resolution single sided images displayed indoors and in high strength outdoor applications whereby wind, light transfer & visibility are required. The PVC film is bonded with the fabric using a chemical process which maintains optimum fabric strength & prevents premature de-lamination whilst maintaining a formulation which is easy to print, finish and install.
