

Technical Fact Sheet

Hahnemühle PR Matt Baryta

Hahnemühle Photo Rag® Matt Baryta, the first matt baryta paper of the Photo Rag® family lends FineArt prints a truly unique character and artistic note. The deep white cotton paper contains no optical brighteners and features a very fine, discreet surface. In combination with the matt premium inkjet coating, it guarantees outstanding print results with impressive reproduction of vivid colours, details, and deep blacks. The additional barium sulphate in the coating enhances the prints tonal range, sharpness, and clarity. Photo Rag® Matt Baryta is characterised by its unique coating. The printed areas reveal an elegant, subtle sheen, while the unprinted areas remain matt to beautifully accentuate brilliance, making it an exclusive alternative to analogue baryta paper. Photo Rag® Matt Baryta is acid- and lignin-free and meets the most exacting requirements in terms of age resistance.
