## Hahnemühle Sustain Photo Gloss 220gsm

Hahnemühle Sustainable Photo Glossy is a bright white inkjet paper made from 100% alpha-cellulose, featuring a smooth surface and a glossy finish. Its innovative, free of plastic composites/film bio inkjet coating is fully recyclable via the standard wastepaper cycle - making it a sustainable alternative to PE-based photo papers. Designed for photo and poster applications, the paper is ideal for everyday use. Plus, it has a lower environmental impact, using less water and generating less CO2 during production compared to traditional photo papers.
