

Technical Fact Sheet

Pengda PD 1800D-420

This PD-1800D multifunctional machine is specifically designed to meet the increasing demands for pieces digital printing, it can both do pieces and rolls. The transfer paper is placed side up on the table and feeds continuously into the machine, the waste paper and the transferred fabric exit under the working table. This model is economical and practical after our perfect development during these years. It is designed for production and sampling, especially has advantage in pre-cut pieces transfer, and it's simple to operate. The design also allows for the use of protection paper to protect the belt from contamination. The customers can add more functions to the machine and optimize it according to their own requirements and our digital printing solutions.
